

DOOR TECHNOLOGY – SECURY MULTI-POINT LOCKS

GU BKS Connect Module

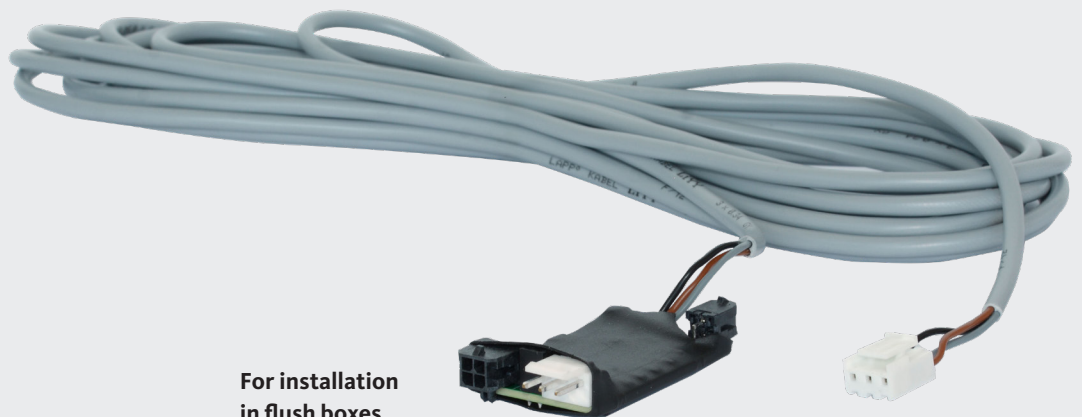

In combination with A-opener and SECURY ePOWER Home 2

Maximum security meets simple retrofitting

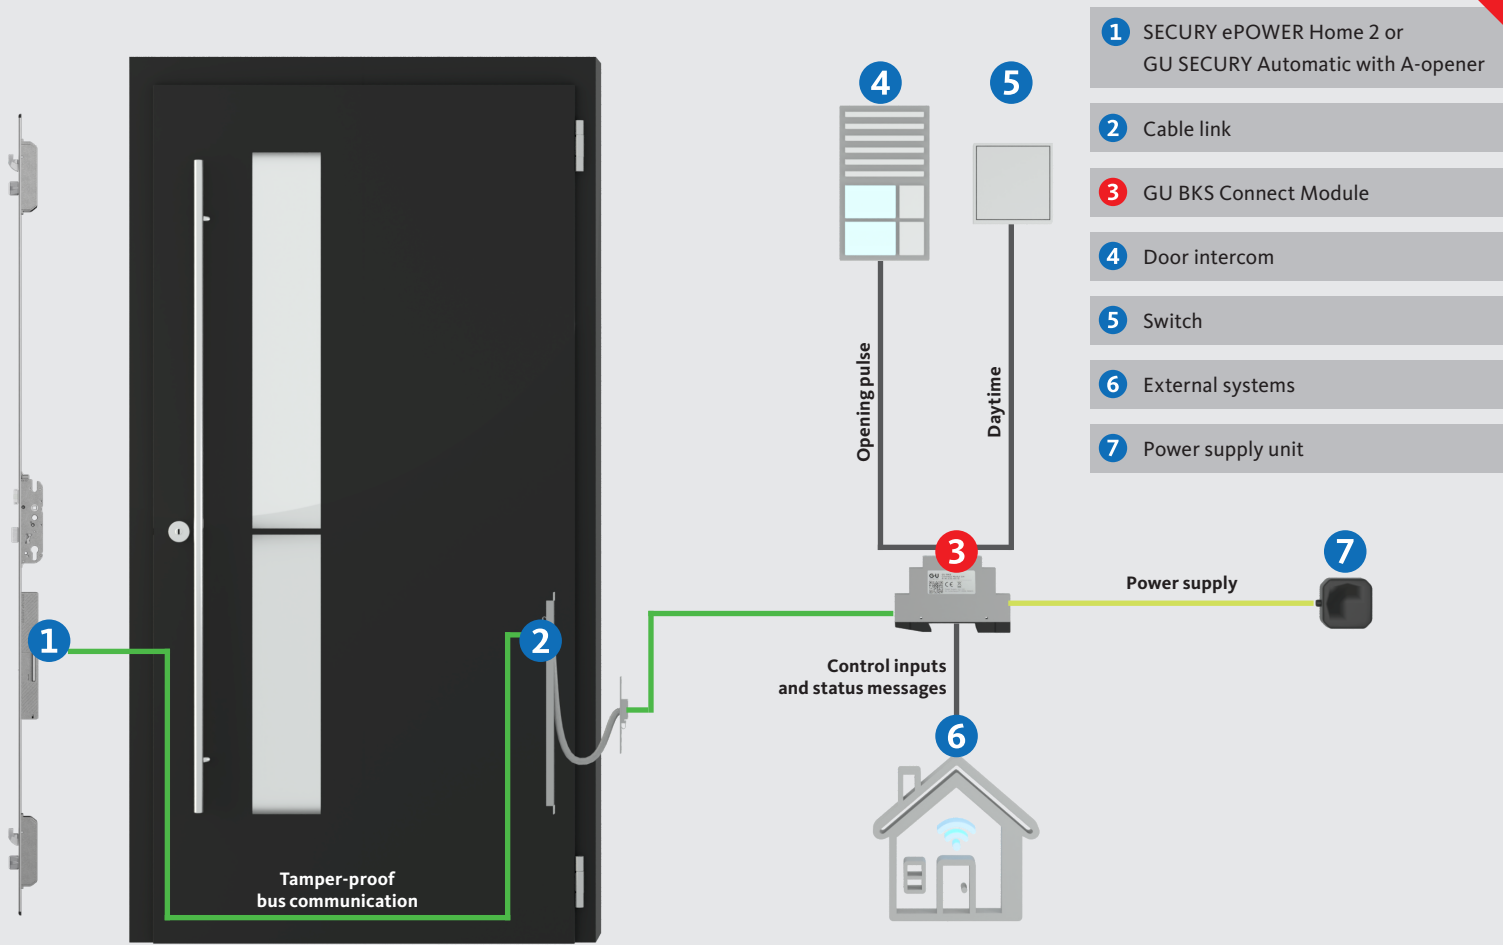

Have you noticed that the requirements for burglar resistance are increasing and the demand for flexible retrofit solutions is rising? The GU BKS Connect Module provides the perfect answer: **tamper-proof bus communication for maximum security** – with simpler faster cabling. Thanks to **intelligent 2-wire technology**, retrofitting of A-openers is possible where up till now only electric strikes have been used.

For installation
in control cabinets

For installation
in flush boxes

The GU BKS Connect Module in detail

The GU BKS Connect Module stands out in the area of multi-point locks as a product that perfectly adapts to individual comfort, security and functionality requirements.

YOUR BENEFITS as fabricator at a glance:

- **Simple wiring:** the bus technology significantly reduces wiring effort and ensures quick and easy installation
- **Various installation options:** available for installation on DIN rail and also as in-wall version, to cater for individual construction requirements
- **Intelligente synchronisation:** up to three A-openers or ePOWER drives can be controlled simultaneously which extends the scope of applications

YOUR BENEFITS as user at a glance:

- **Increased burglar resistance:** thanks to tamper-proof bus communication
- **Straightforward retrofitting:** operation of A-openers or ePOWER drives with only two wires – ideal für no-fuss renovations without laborious rewiring
- **Wide range of connection options:** additional inputs and outputs significantly enhance the range of functions in combination with the ePOWER drive
