

WINDOW HARDWARE

BULLET-CATCH

AVAILABLE EXCLUSIVELY FROM GRETSCH-UNITAS

## GU bullet-catch

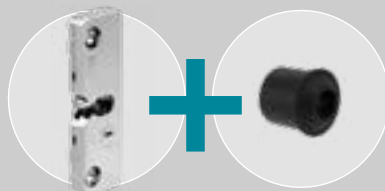

FOR BALCONY-DOORS MADE OF TIMBER, PVC OR ALUMINIUM

### What is a balcony bullet-catch needed for?

Balcony-doors are opened and closed daily. A high-quality bullet-catch ensures that the door remains securely closed without having to lock it. The bullet-catch is indispensable for doors that are frequently exposed to windy conditions or are often used. Our innovative balcony-door bullet-catch is a convenient, durable and flexible solution.

#### The standard solution

For mounting the roller-cam on the faceplate

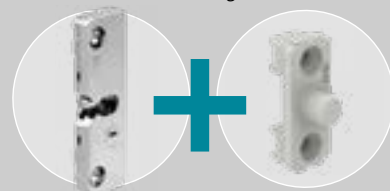

Bullet-catch

Roller-cam

#### The special solution

For mounting the roller-cam in the hardware groove, e.g. on the sash horizontally at the top, or at the bottom when using 2-sash elements

## A closer look at our innovative balcony-door bullet-catch

### Functional highlights

- 1. Automatic height adjustment:** unevenness or slight deviations in the installation height? No problem! Our bullet-catch automatically adapts to differences in height to ensure an optimum fit and reliable operation.
- 2. Adjustable engaging and disengaging force:** the catch can be individually adapted to varying general conditions and the personal preferences of the user. This is done simply by adjusting the engaging and disengaging force until the door closes smoothly and opens easily.
- 3. Maintenance-free bullet-catch roller-cam made of PVC:** in future the new roller-cam will be made of rugged PVC which ensures a high corrosion resistance without relubrication – in other words, the GU bullet-catch solution is maintenance-free.

### Technical details

- Material:** a combination of high-quality metal parts for the bullet-catches and rugged PVC for the bullet-catch roller-cams ensures outstanding stability and durability.
- Adjustment ranges:** the engaging and disengaging force can be individually adjusted via a set screw – the balcony-door will therefore always be held securely in the closed position despite changes in the general conditions. The height adjustment is automatic.
- Area of application:** suitable for timber, PVC or aluminium balcony-doors.

## THIS COMBINATION OF FUNCTIONS IS UNIQUE ON THE MARKET!

### + OUTSTANDING COMFORT FOR THE FABRICATOR

Easy and fast installation by making automatic adjustments and flexible settings

### + OUTSTANDING COMFORT FOR THE END USER

Continuous maintenance-free functionality, easy to operate at any time

**TOGETHER, WE MAKE DAY-TO-DAY LIFE EASIER!**
